

PYRAMID

Iz oblika prolosti izmislili smo suncobran buducnosti. Piramid, novi, revolucionarni, patentirani pozadinski osvetljeni, suncobrani konstruisani od čvrstih panela.

From the shapes of the past we have invented the parasol of the future. Pyramid, a new, revolutionary, patented backlit, rigid panel constructed parasol.

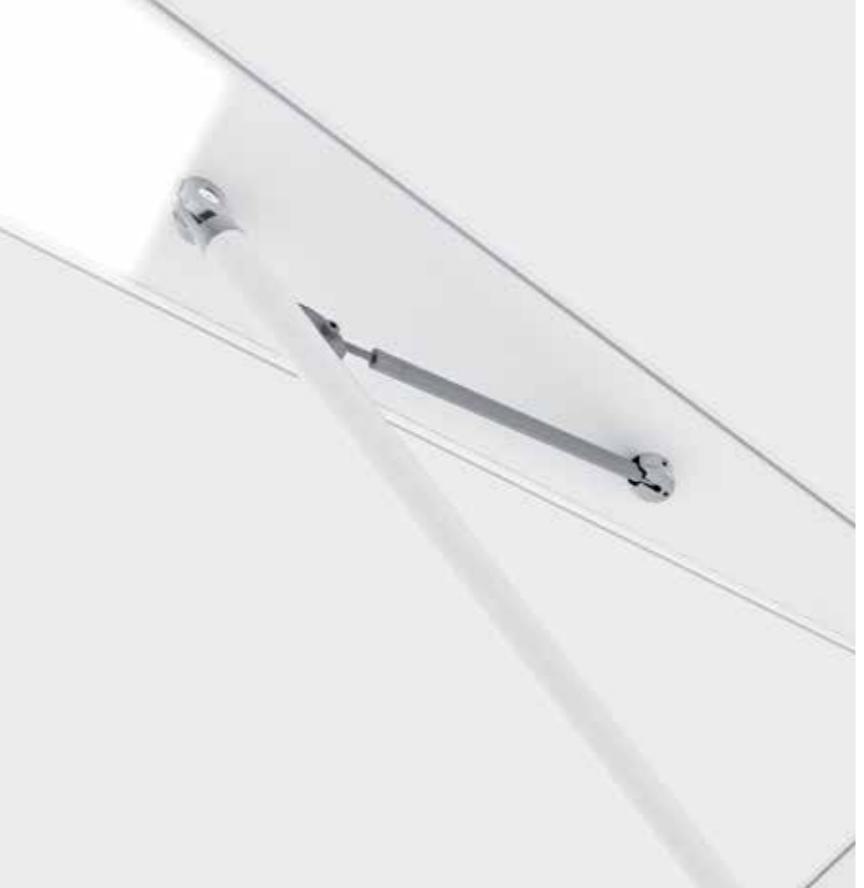

Pyramid dodaje dodir elegancije na bilo koju lokaciju u kojoj se nalazi, štiteći od sunca svoje goste od zore do sumraka. Kada je otvoren, pruža hlad i zaklon od kiše; ploče sa pozadinskim osvetljenjem omogućavaju da se može koristiti u večernjim časovima, bez potrebe za dodatnim sistemima osvetljenja. Kada se zatvori, pretvara se u izuzetno dizajniranu ukrasnu lampu.

Pyramid adds a touch of elegance to any location it is placed in, shading its guests from dawn till dusk. When open, it provides shade and shelter from the rain; its backlit panels allow it to be used in the evenings, without having to resort to additional lighting systems. When closed, it turns into a exquisitely designed ornamental lamp.

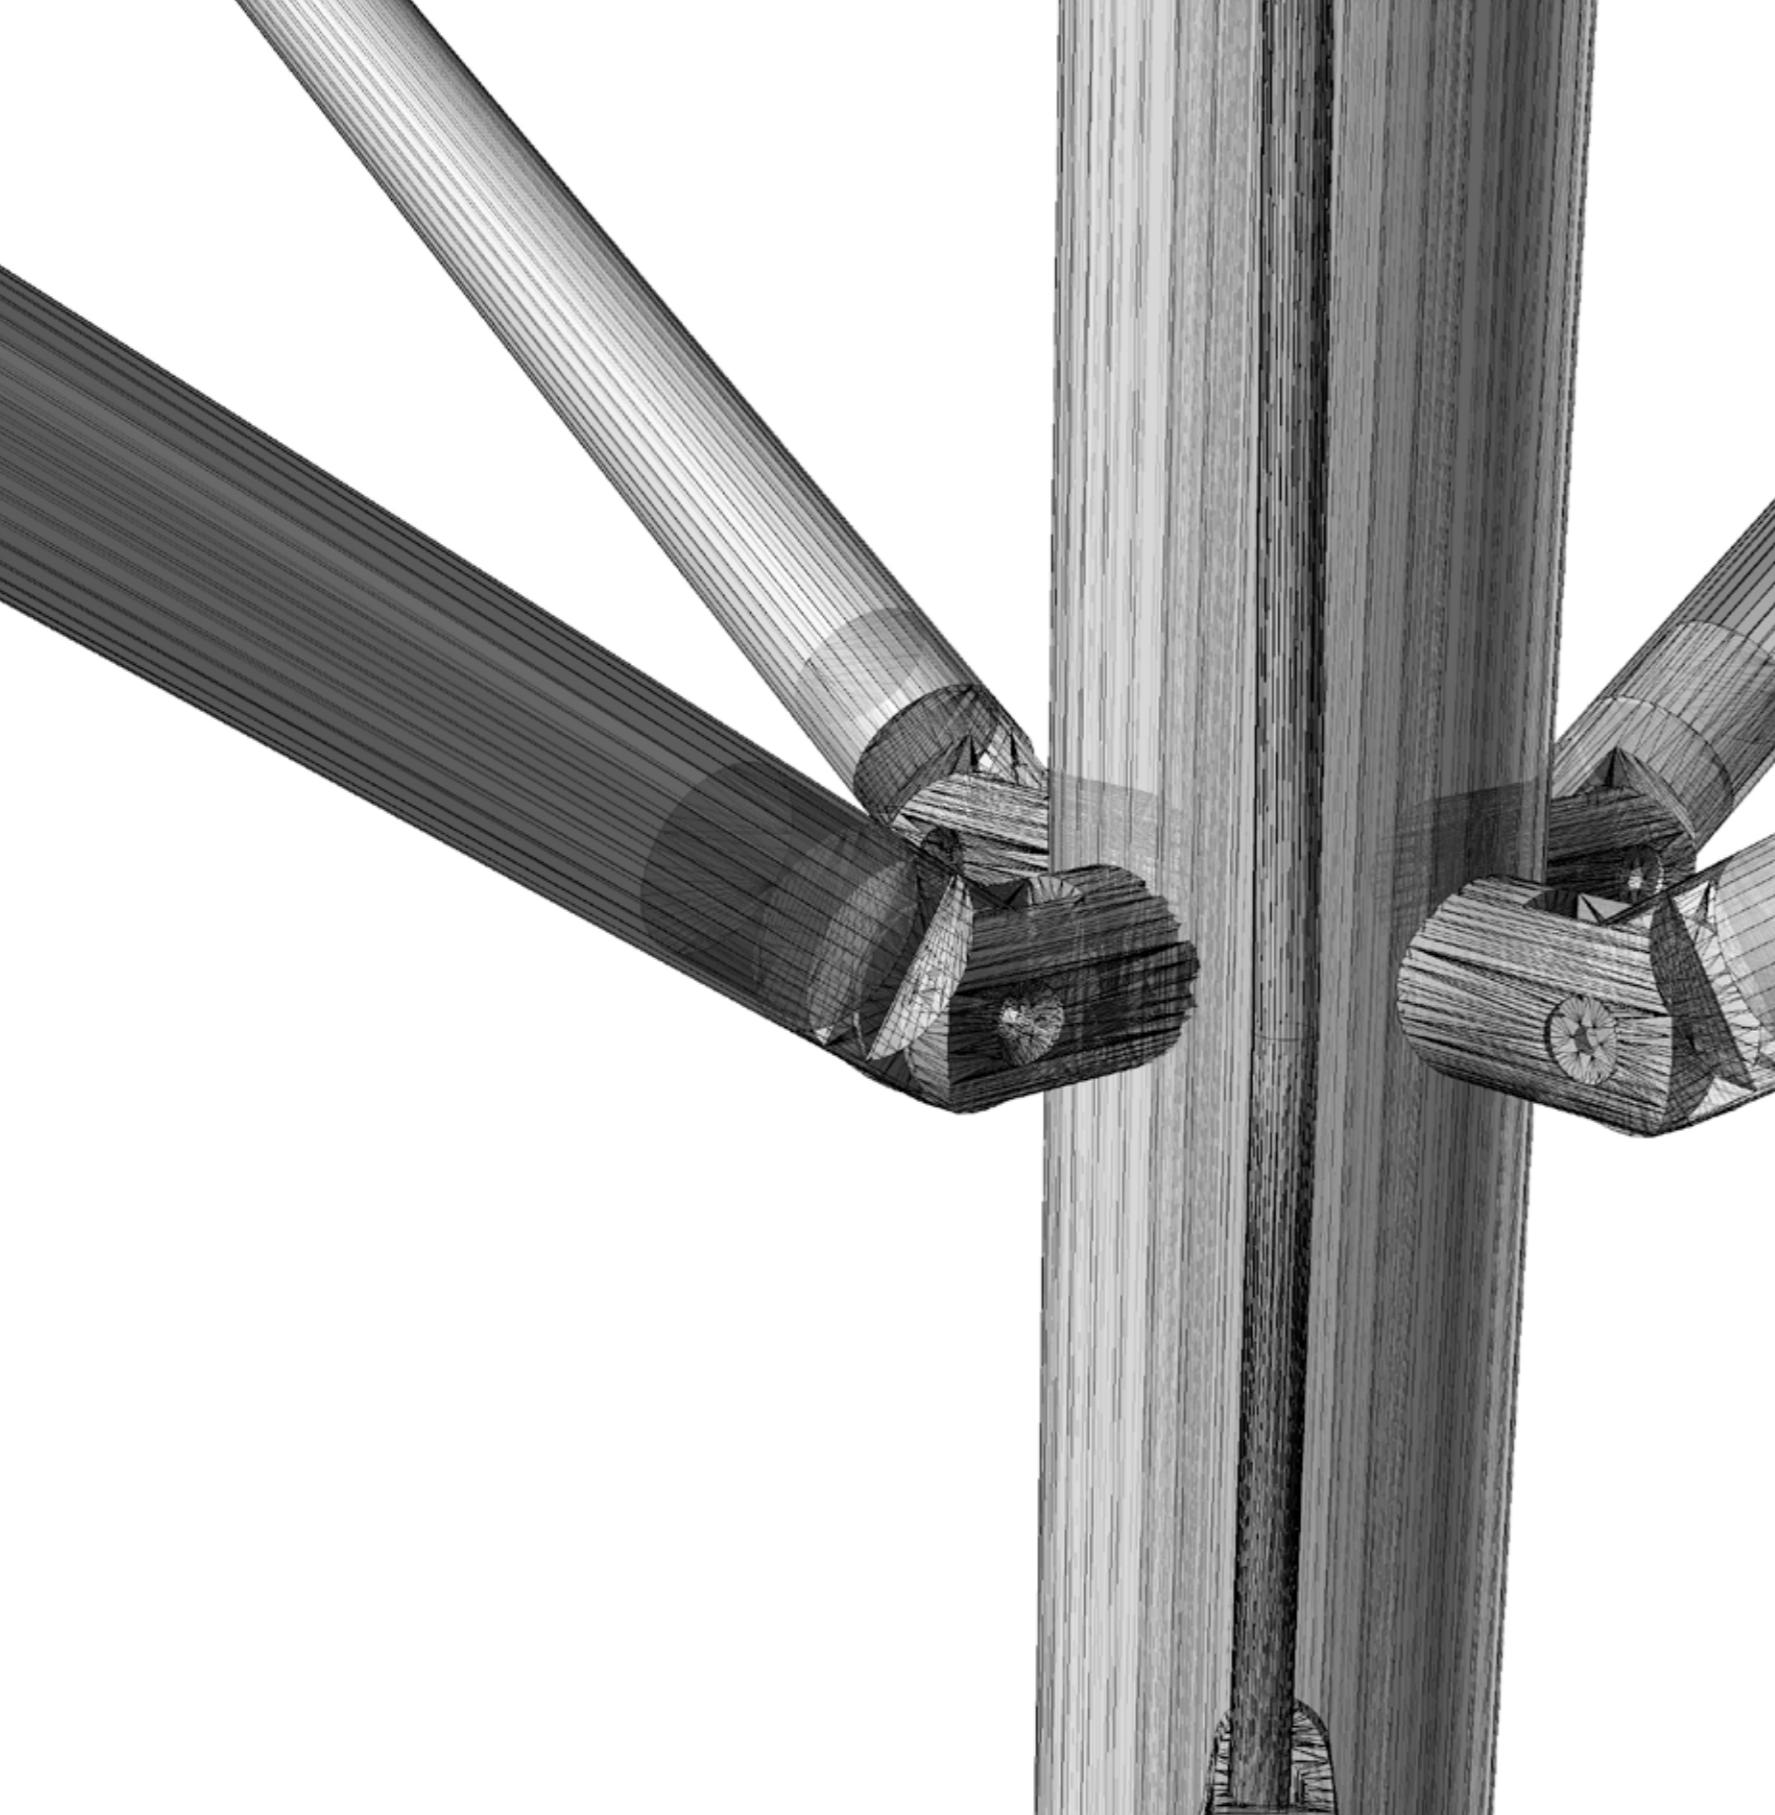

Pyramid odlikuju krute ploče presvučene tkaninom koja se lako štampa, što je čini potpuno prilagodljivom iznutra i spolja. Njeni potencijali kao komercijalnog gadgeta i čistog platna za umetnike su gotovo beskrajni, obezbeđujući maksimalnu slobodu izražavanja.

Pyramid features rigid panels upholstered with an easy to print fabric, which make it fully customisable both inside and outside. Its potentials as a commercial gadget and a clean canvas for artists are practically endless, ensuring maximum freedom of expression.

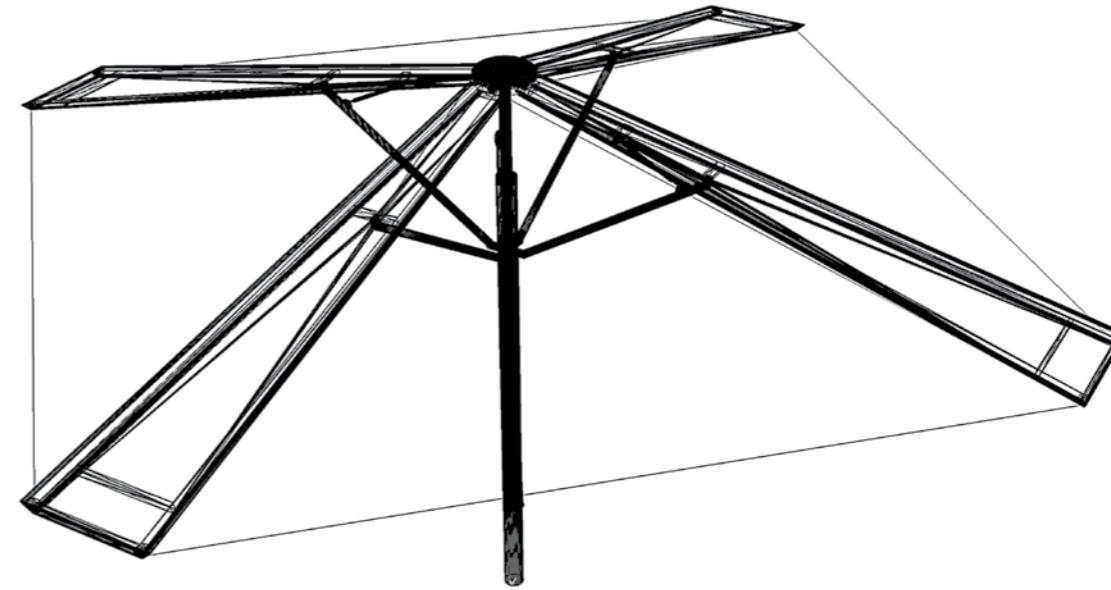

Opremljen je jednostavnim, samo-balansirajućim i servo-pomoćnim mehanizmom, dostupan u potpuno automatskoj verziji sa daljinskim upravljanjem. Izrađen je od nautičkih materijala i komponenti koje su vrlo otporne na atmosferske agense.

It is provided with a simple, self-balancing and servo-assisted mechanism also available in fully automatic version with remote control. It's built with nautical materials and components that are highly resistant to atmospheric agents.

Dizajnerska vizija inspirisana konceptima proporcije, estetike i pažnje do detalja, zajedno sa dubokim razumevanjem materijala, vodi poslovnu filozofiju Robertopamio + partneri i nalazi svoj puni izraz u osvetljenju i dizajnu nameštaja. Kompanija je sarađivala na projektima u oblasti osvetljenja, nameštaja i uličnog nameštaja.

A design vision inspired by the concepts of proportion, aesthetics and attention to detail, along with a deep understanding of materials, guides the **Robertopamio+partners** business philosophy and finds its fullest expression in the lighting and furniture designs. The company has collaborated on projects in the fields of lighting, furniture and street furniture.

Naš potpuno novi suncobran skriva i štiti svoju dragocenu tkaninu iznutra, čuvajući je od habanja tokom vremena. Tkanina je potpuno bešavna, potpuno vodootporna i otporna na vatru. Piramida je dizajnirana kao modularni proizvod, kako bi se osiguralo da se sve njene komponente mogu pojedinačno zameniti, kao što je segment tkanine ili kruta ploča, ako je potrebno. Električne žice i kablovi su skriveni unutar konstrukcije kako bi se očuvala njegova estetska vrednost i osigurao dug životni vek električnog sistema. Piramid je takođe ekološki prihvatljiv, jer zatamnjena LED svetla pružaju visoko energetski efikasan sistem osvetljenja. Upotreba sistema niskog napona je od velike koristi u pogledu sigurnosti i usklađenosti sa referentnim standardima. Patent piramide prošao je strukturne proračune i simulacije aerodinamičkog otpora kako bi ga učinio pogodnim za najrazličitija okruženja i primene.

Our brand new parasol hides and protects its precious fabric inside, preserving it by wear over time. The fabric is totally seamless, fully waterproof and fireproof. Pyramid has been designed as a modular product, to ensure that all its components can be individually replaced, such as a fabric segment or a rigid panel, if required. Electrical wires and cables are concealed inside the structure in order to preserve its aesthetic value and to ensure the long life of the electrical system. Pyramid is also environmentally friendly, as its dimming LED lights provide a high energy efficient lighting system. Using a low voltage system is highly beneficial in terms of safety and compliance with reference standards. The Pyramid patent underwent structural calculations and aerodynamic resistance simulations to make it suitable for the most diverse environments and applications.
